suxxesso Test Content

Our **predefined standard test cases** allow you to achieve an **extensive test coverage quickly and efficiently**. Several hundred test cases for multiples SAP Modules such as: FI, CO, MM, SD or PP can be used productively in your system within a few days.

This represents an **80% Test coverage**, a **reduction of the automation investment costs of 93%** and **lowering the maintenance costs** t**o 77%**.

Experten Know-How

suxxesso Test Content is based on decades of consulting expertise. The test cases are defined and designed by SAP leading experts. **Detailed product and process know-how** as well as **international project experience** across all sectors, guarantee the accuracy of all contained test cases and the best possible test coverage of your business processes.

Test cases description

Every test case is explained clearly and **in detail** with a **textual** and **model-based** (BPMN 2.0 Standards) **description**. In this context you are able to benefit from high quality test cases descriptions.

General test cases

suxxesso Test Content includes the **automation of all** defined and described **test cases** based on the latest technical standards. It also provides **constant extension of the test coverage**, **maintenance** of the automated test cases and an extensive **Utility Library** used to achieve a clean and accurate approach of GUI-Controls.

Verification

The **accurate verification** of the test results helps to guarantee and evaluate the quality of your systems. **Detailed reports** provide you with the **figures** of the performed test run as well as with **screenshots** and **errors of failed test cases** that can be used to analyze and correct the error.
