

suxcesso Test Pilot

In addition to suxxesso **Test Content** for SAP Solutions, which our out of the box test coverage and core functionalities in FI, CO, MM, SD and PP is provided with, the **suxcesso Test Pilot** allows you to create test cases for specific processes, custom mode and additional developments (e.g. Z-Programs or custom code). This allows us to **speed-up the development of test cases based on SAP technologies** by at least 100% (compared to common test automation tools used by experienced test consultants)

Software license requirement:

Valid license for suxxesso Tool Suite for SAP-Solutions

Process automation

The following are some of suxxesso Test Pilot's **key-features**:

- efficient real-time recording of processes, including screenshots
- GUI-Wizard for the recording of verification steps
- easy input and edit of variables
- deactivate or delete test steps
- selection of executing test steps
- (re) open, edit and save test scripts
- ad-hoc execution of test scripts
- video recording for training purposes
- automated creation of process documentation

Verification

As part of the process recording **further verification** steps can be added easily and directly.

Link to suxxesso Data Manager

Using variables instead of constant values in different fields enables the link to **Data Manager**, allowing to easily select the test data for further test runs.
